

**Prof. Dr. Alberto Cattaneo**  
EAPRIL 2022 keynote speaker

**Alberto A. P. Cattaneo**, PhD, is professor and head of the research field “Educational Technologies in VET Programmes” at the Swiss Federal University for Vocational Education and Training (SFUVET), Switzerland. His actual main research fields concern the integration of ICT in teaching-and-learning processes. Depending on the project, this can mean – on the “teaching” side – investigating teacher education and professional competence development, in particular related to digital competence; on the “learning” side, investigating reflective learning in VET, instructional design choices, and multimedia learning. Concerning this last point, in the recent years he devoted special attention to the affordances and pedagogical potentials of hypervideos, and more in general of immersive technologies (augmented reality, virtual reality and 360° videos).
